Eye & Ear

Short summary from Doctors' Handbook for DMSO

Many doctors have reported positive results with a 40% DMSO solution applied to the eye with an eye dropper. When this treatment is done usually one drop is applied in each eye once a day. This can be done for all problems involving vision or pain in the eyes.

When the DMSO is applied there is normally a stinging sensation in the eye for 30 or 40 seconds. This is no cause for worry. Normally after the very brief stinging the eyes will feel better than before the treatment.

DMSO Has also been used successfully to treat vision problems of the elderly. One Los Angeles area doctor reported that several patients were able to more easily read fine print after only one week using 40% DMSO eye drops. Another also drank a teaspoon of DMSO daily in orange juice.

His vision improved during the first week of treatment. One month after starting treatment this man was able to resume reading the books in his collection. He also said he could think more clearly and his whole body felt better.

This writer has used DMSO eye drops with 40% DMSO in his own eyes when the eyes have felt tired. There has always been immediate relief. After the initial stinging the eyes always felt fresh with no pain.

- **Ørene:** 1 dråpe i øret
- **Huden:** Påsmøres.

Eye or Ear treatment with DMSO 40%

1 drop in each Eye daily

2 drops in each Ear daily

1 teaspoon in juice, drink daily.

Result: Better or all well after 1-4 weeks. No side effects!

Skin problems, Wounds and sores

Short summary from Doctors' Handbook for DMSO

This treatment consisted of DMSO 100% mixed with Aloe Vera. The mixture was sprayed directly onto the wounds three times a week. There was some pain at the time of application. However, this pain only lasted a short time and did not prevent treatment. Most patients received immediate relief and in some cases the pain completely stopped after 3 week treatment.

Dr. Mirando-Tirado said they were surprised by the rapid healing which occurred after only three treatments in some superficial infected wounds. Of the total number of patients, 95% were considered to be completely cured and able to resume their normal activities.

Several individual examples were given. One involved a 60 year old man who had been suffering from an ulcer of the right leg for 15 years. This ulcer which was two inches in diameter was caused by the rupture of a varicose vein. Various types of treatment had been tried over the 15 years that he suffered from the problem. However, nothing really worked.

After 20 treatments with the DMSO spray, the ulcer healed completely and the sore did not return.

More recently a 90 year old lady in Los Angeles suffered from severe varicose ulcers in both legs. This lady who was a retired school teacher, was afraid that she had cancer of both legs. It was explained to her that she had varicose veins. These later caused sores or ulcers to form. The dermatologist wanted to operate to remove the bad veins. This lady was treated with a skin lotion containing DMSO, Aloe Vera and eucalyptus oil. The lotion was applied to both legs twice a day. **There was immediate reduction of pain. One month later the sores were completely healed and have not returned.**

If the treatment does not provide relief, it will at least not harm the patients.

Treatment with DMSO 100% mixed with 50% Aloe Vera (from the plant)

Smear/spray a thin layer over the problem - 2 times a day.

Result: Better or all well after 1-4 weeks. No side effects!
